INTERIM MANAGEMENT & CONSULTING

LEAD ENGINEERING · STEER PROGRAMS · IT INTO PRODUCTION

Lead engineering. Steer programs. Bring IT into production.

Digital transformation for manufacturing companies in Switzerland and internationally, also as interim management.

Positioning

I lead digitalization programs where engineering, IT and manufacturing have to work as one. As an entrepreneur, I am accountable for results; as a program manager, I steer programs across borders. My technical depth is in digitalization and manufacturing IT: PLM, PDM, MES and ERP, including Siemens Teamcenter, Dassault 3DEXPERIENCE and SAP, in regulated industries. Over 25 years of experience in aerospace, medical devices and industry.

25+

years of experience in aerospace, medical devices and industry.

Typical engagements

Leading a transformation or PLM/MES program, stabilizing a troubled program, filling a leadership role on an interim basis.

Core services

IT roadmaps

From target state to an implementation plan for engineering, manufacturing and IT.

Process optimization

Simpler workflows with Lean Six Sigma (Black Belt).

Digital value chains

Connected data from development to the shop floor.

Interim management

Program or engineering leadership for a defined period, with a clean handover.

References

Swiss technology group (aerospace/defense)

Led the digital transformation program.

Medical devices

PLM and manufacturing IT, system validation under FDA 21 CFR Part 11.

Aviation

Headed engineering for the A350 XWB cabin at Airbus, including the certification process with EASA; as managing director, built and ran two aerospace small businesses.
